

Pressure sensor with IO-Link PNP or NPN switching output Model A-1200

WIKA data sheet PE 81.90

Applications

- Machine tools
- Hydraulics and pneumatics
- Automation engineering
- Special-purpose machine building

Special features

- Industry 4.0-ready IO-Link sensor improves connectivity and diagnostics
- Designed for rough demands of up to 1,000 g shock and -40 ... +125 °C [-40 ... +257 °F]
- Optimised design makes OEM machine integration easier
- Multicolour 360° LED status display simplifies troubleshooting and localisation

Description

The model A-1200 is a pressure sensor without display that can be flexibly programmed via IO-Link and used in a variety of ways – whether for pressure monitoring or as an electronic PNP/NPN switch for process control.

More safety through digital connectivity

Thanks to IO-Link, the model A-1200 pressure sensor is ideal for use in intelligent machines. To ensure precise measurement results over the long term, the pressure sensor has integrated diagnostic functions that monitor the instrument status. In addition, the model A-1200 can be configured externally and conveniently via the digital signal and adjusted at any time.

Robust and durable, even in harsh environments

The robust version of the model A-1200 has been designed specifically for extreme environmental conditions. With a welded M12 x 1 connector, this can easily withstand shock loads of up to 1,000 g. It is designed for medium

temperatures between -40 ... +125 °C and can therefore be integrated into almost any application. Downtime and associated maintenance expenses and costs decrease significantly due to the stable design.

Simple OEM integration

The integration of the model A-1200 pressure sensor into OEM series production is accomplished quickly. The sensors can be preset by WIKA based on the customer's desired parameters. Alternatively, automated IO-Link programming can shorten the configuration time in the factory.

Fast maintenance thanks to visual feedback

A 360° LED status display provides visual information about the sensor status. The green (OK), yellow (critical state) or red (error) signal enables intuitive and fast error detection and correction. For maintenance, a blinking function via IO-Link facilitates the clear localisation of a pressure sensor. Confusion is prevented and maintenance is accelerated.

The given measuring ranges are also available in kg/cm², kPa and MPa.

Special measuring ranges between 0 ... 0.4 and 0 ... 1,000 bar [0 ... 10 to 0 ... 15,000 psi] are available on request.

Special measuring ranges have a reduced long-term stability and higher temperature errors.

Overload safety

The overload safety is based on the sensor element used. Dependent on the selected process connection and the sealing, restrictions in overload safety can result.

- Measuring range ≤ 600 bar [< 8,000 psi]: 2 times
- Measuring range > 1,000 bar [≥ 8,000 psi]: 1.5 times

Increased overload safety (option)

With increased overload safety there are deviations in temperature error and long-term stability.

Long-term drift, switching output

≤ ±0.1 %

≤ ±0.2 % for measuring ranges ≤ 0.69 bar [10 psi]

≤ ±0.26 % for increased overload safety

Switching current dependency

With switching currents greater than 50 mA:

≤ ±0.05 % per 50 mA additional applied switching current

Versions without teach function, LED status display and IO-Link 1.1:

≤ ±0.075 % per 50 mA additional applied switching current

Temperature error in rated temperature range

≤ ±1.5 % of span

≤ ±2.5 % of span for increased overload safety

Temperature coefficients in rated temperature range

Mean TC zero point: ≤ ±0.16 % of span/10 K

Mean TC span: ≤ ±0.16 % of span/10 K

Pressure transmission medium

Synthetic oil for all gauge pressure measuring ranges < 10 bar [150 psi] ¹⁾ and all absolute pressure measuring ranges.

¹⁾ < 16 bar [250 psi] with increased overload safety

Options for specific media

- Oil and grease free: Residual hydrocarbon: < 1,000 mg/m²
- Oxygen, oil and grease free: Residual hydrocarbon: < 200 mg/m²

Packaging: Protection cap on the process connection, instrument sealed in a vacuum bag

Max. permissible temperature -20 ... +60 °C [-4 ... +140 °F]

Available measuring ranges:

0 ... 0.4 bar to 0 ... 400 bar [0 ... 10 to 0 ... 5,000 psi]

Other connections on request.

Restrictor (option)

For applications where pressure spikes can occur, the use of a restrictor is recommended. The restrictor narrows the pressure port to 0.6 mm and thus increases the resistance against pressure spikes.

Enlarged pressure port (option)

For applications with contaminated or viscous media, for specific process connections, an enlarged pressure port with a 6 or 12 mm diameter is available in order to reduce the risk of a pressure port blocking.
